Packing and packaging for RS-6A - Contract PSC-184-UNV

REFERENCE: Contractor's letter dated 11 December 1953 on same subject

1. The reference forwarded drawings defining the RS-6 packing and packaging details, and asked whether the same details would be acceptable for the RS-6A.

2. The packing procedures used for RS-6 equipment have been quite satisfactory and will be acceptable for the RS-6A equipment with the following additions:

- a) Set serial number should be marked on sealing tape which seals vapor-proof barrier (tape will not be heat sealed).
- b) Headset and ear clip should be wrapped in cushioning material (about 1/4 inch thickness) to avoid damage.

3. In the event the Office of Logistics would like to have the specifications reviewed by its packing experts, we are forwarding herewith the reference letter and its attachments. In the event a change is deemed necessary by your office, we should like to discuss it prior to its formalization. Subject to your concurrence, therefore, the procedures described in the reference together with the additions of 2a and 2b above are approved for the RS-6A production. Please return the reference for our files after you have completed your review.
